Elementary Prime number theory

Primes in Arithmetic Progressions Gauss suggested that a good approximation to π(x), the number of primes not exceeding x, is

$$\mathsf{li}(x) = \int_2^x \frac{dt}{\log t}.$$

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions Gauss suggested that a good approximation to π(x), the number of primes not exceeding x, is

$$\operatorname{li}(x) = \int_2^x \frac{dt}{\log t}.$$

 He also carried out some calculations for x ≤ 1000. Today we have much more extensive calculations.

◆□ ▶ ◆□ ▶ ◆三 ▶ ◆□ ▶ ◆□ ◆ ●

- The interesting thing is that the support of Λ is on the prime powers, the higher powers are quite rare, at most √x of them not exceeding x.
- This function is definitely not multiplicative, since $\Lambda(1) = 0.$

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • However the von Mangoldt function does satisfy some interesting relationships.

Lemma 1

Let $n \in \mathbb{N}$. Then $\sum_{m|n} \Lambda(m) = \log n$.

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • However the von Mangoldt function does satisfy some interesting relationships.

Lemma 1

Let
$$n \in \mathbb{N}$$
. Then $\sum_{m|n} \Lambda(m) = \log n$.

• The proof is a simple counting argument.

Proof.

Write $n = p_1^{k_1} \dots p_r^{k_r}$ with the p_j distinct. Then for a non-zero contribution to the sum we have $m = p_s^{j_s}$ for some *s* with $1 \le s \le r$ and j_s with $1 \le j_s \le k_s$. Thus the sum is

$$\sum_{s=1}^r \sum_{j_s=1}^{k_s} \log p_s = \log n.$$

▲ロ ▶ ▲ □ ▶ ▲ □ ▶ ▲ □ ▶ ▲ □ ▶ ● ○ ○ ○

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • We need to know something about the average of log *n*.

Lemma 2 (Stirling)

Suppose that $X \in \mathbb{R}$ and $X \ge 2$. Then

$$\sum_{n\leq X}\log n=X(\log X-1)+O(\log X).$$

▲ロ ▶ ▲周 ▶ ▲ 国 ▶ ▲ 国 ▶ ● の Q @

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions This can be thought of as the logarithm of Stirling's formula for [X]!.

Proof.

We have

 $\sum_{n\leq n\leq n}$

$$\sum_{X} \log n = \sum_{n \le X} \left(\log X - \int_{n}^{X} \frac{dt}{t} \right)$$
$$= \lfloor X \rfloor \log X - \int_{1}^{X} \frac{\lfloor t \rfloor}{t} dt$$
$$= X(\log X - 1) + \int_{1}^{X} \frac{t - \lfloor t \rfloor}{t} dt + O(\log X).$$

*ロ * * @ * * ミ * ミ * ・ ミ * の < @

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions Now we can say something about averages of the von Mangoldt function.

Theorem 3

Suppose that $X \in \mathbb{R}$ and $X \ge 2$. Then

$$\sum_{m \leq X} \Lambda(m) \left\lfloor \frac{X}{m} \right\rfloor = X(\log X - 1) + O(\log X).$$

▲ロト ▲周ト ▲ヨト ▲ヨト ヨー のくで

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions Now we can say something about averages of the von Mangoldt function.

Theorem 3

Suppose that $X \in \mathbb{R}$ and $X \ge 2$. Then

$$\sum_{m \leq X} \Lambda(m) \left\lfloor \frac{X}{m} \right\rfloor = X(\log X - 1) + O(\log X).$$

This is easy

Proof.

We substitute from the first lemma into the second. Thus

$$\sum_{n\leq X}\sum_{m\mid n}\Lambda(m)=X(\log X-1)+O(\log X).$$

Now we interchange the order in the double sum and count the number of multiples of m not exceeding X.

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions

- At this stage it is necessary to introduce some of the fundamental counting functions of prime number theory.
- For $X \ge 0$ we define

$$\psi(X) = \sum_{n \le X} \Lambda(n),$$
$$\vartheta(X) = \sum_{p \le X} \log p,$$
$$\pi(X) = \sum_{p \le X} 1.$$

▲ロト ▲周ト ▲ヨト ▲ヨト ヨー のくで

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • The following theorem shows the close relationship between these three functions.

Theorem 4

Suppose that $X \ge 2$. Then

$$\psi(X) = \sum_{k} \vartheta(X^{1/k}),$$

$$\vartheta(X) = \sum_{k} \mu(k)\psi(X^{1/k}),$$

$$\pi(X) = \frac{\vartheta(X)}{\log X} + \int_{2}^{X} \frac{\vartheta(t)}{t \log^{2} t} dt,$$

$$\vartheta(X) = \pi(X) \log X - \int_{2}^{X} \frac{\pi(t)}{t} dt$$

Note that each of these functions are 0 when X < 2, so the sums are all finite.

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • We prove

$$\begin{split} \psi(X) &= \sum_{k} \vartheta(X^{1/k}), \\ \vartheta(X) &= \sum_{k} \mu(k) \psi(X^{1/k}), \\ \pi(X) &= \frac{\vartheta(X)}{\log X} + \int_{2}^{X} \frac{\vartheta(t)}{t \log^{2} t} dt, \\ \vartheta(X) &= \pi(X) \log X - \int_{2}^{X} \frac{\pi(t)}{t} dt. \end{split}$$

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • We prove

$$\begin{split} \psi(X) &= \sum_{k} \vartheta(X^{1/k}), \\ \vartheta(X) &= \sum_{k} \mu(k) \psi(X^{1/k}), \\ \pi(X) &= \frac{\vartheta(X)}{\log X} + \int_{2}^{X} \frac{\vartheta(t)}{t \log^{2} t} dt, \\ \vartheta(X) &= \pi(X) \log X - \int_{2}^{X} \frac{\pi(t)}{t} dt. \end{split}$$

By the definition of Λ we have

$$\psi(X) = \sum_{k} \sum_{p \leq X^{1/k}} \log p = \sum_{k} \vartheta(X^{1/k}).$$

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ - 三 - のへぐ

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • We prove

$$\begin{split} \psi(X) &= \sum_{k} \vartheta(X^{1/k}), \\ \vartheta(X) &= \sum_{k} \mu(k) \psi(X^{1/k}), \\ \pi(X) &= \frac{\vartheta(X)}{\log X} + \int_{2}^{X} \frac{\vartheta(t)}{t \log^{2} t} dt, \\ \vartheta(X) &= \pi(X) \log X - \int_{2}^{X} \frac{\pi(t)}{t} dt. \end{split}$$

• By the definition of Λ we have

$$\psi(X) = \sum_{k} \sum_{p \leq X^{1/k}} \log p = \sum_{k} \vartheta(X^{1/k}).$$

• Hence we have

$$\sum_{k} \mu(k)\psi(X^{1/k}) = \sum_{k} \mu(k) \sum_{l} \vartheta(X^{1/(kl)}).$$

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • Collecting together the terms for which kl = m for a given m this becomes

$$\sum_{m} \vartheta(X^{1/m}) \sum_{k|m} \mu(k) = \vartheta(X).$$

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • Collecting together the terms for which kl = m for a given m this becomes

$$\sum_{m} \vartheta(X^{1/m}) \sum_{k|m} \mu(k) = \vartheta(X).$$

• We also have

$$\pi(X) = \sum_{p \le X} (\log p) \left(\frac{1}{\log X} + \int_p^X \frac{dt}{t \log^2 t} \right)$$
$$= \frac{\vartheta(X)}{\log X} + \int_2^X \frac{\vartheta(t)}{t \log^2 t} dt.$$

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • Collecting together the terms for which kl = m for a given m this becomes

$$\sum_m \vartheta(X^{1/m}) \sum_{k|m} \mu(k) = \vartheta(X).$$

• We also have

$$\pi(X) = \sum_{p \le X} (\log p) \left(\frac{1}{\log X} + \int_p^X \frac{dt}{t \log^2 t} \right)$$
$$= \frac{\vartheta(X)}{\log X} + \int_2^X \frac{\vartheta(t)}{t \log^2 t} dt.$$

• The final identity is similar.

$$\vartheta(X) = \sum_{p \leq X} \log X - \sum_{p \leq X} \int_p^X \frac{dt}{t}$$

etcetera.

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • Now we come to a series of theorems which are still used frequently.

Theorem 5 (Chebyshev)

There are positive constants C_1 and C_2 such that for each $X \in \mathbb{R}$ with $X \ge 2$ we have

$$C_1X < \psi(X) < C_2X.$$

Primes in Arithmetic Progressions

• Hence

$$\psi(X) \ge \sum_{n \le X} \Lambda(n) f(X/n)$$
$$= \sum_{n \le X} \Lambda(n) \left\lfloor \frac{X}{n} \right\rfloor - 2 \sum_{n \le X/2} \Lambda(n) \left\lfloor \frac{X/2}{n} \right\rfloor.$$

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions

• Hence

$$\psi(X) \ge \sum_{n \le X} \Lambda(n) f(X/n)$$
$$= \sum_{n \le X} \Lambda(n) \left\lfloor \frac{X}{n} \right\rfloor - 2 \sum_{n \le X/2} \Lambda(n) \left\lfloor \frac{X/2}{n} \right\rfloor$$

•

 Here we used the fact that there is no contribution to the second sum when X/2 < n ≤ X.

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions

• Hence

$$\psi(X) \ge \sum_{n \le X} \Lambda(n) f(X/n)$$
$$= \sum_{n \le X} \Lambda(n) \left\lfloor \frac{X}{n} \right\rfloor - 2 \sum_{n \le X/2} \Lambda(n) \left\lfloor \frac{X/2}{n} \right\rfloor$$

٠

*ロ * * @ * * ミ * ミ * ・ ミ * の < @

- Here we used the fact that there is no contribution to the second sum when X/2 < n ≤ X.
- Now we apply Theorem 3 and obtain for $x \ge 4$

$$X(\log X - 1) - 2\frac{X}{2}\left(\log \frac{X}{2} - 1\right) + O(\log X)$$

= $X \log 2 + O(\log X)$.

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions

• Hence

$$\psi(X) \ge \sum_{n \le X} \Lambda(n) f(X/n)$$
$$= \sum_{n \le X} \Lambda(n) \left\lfloor \frac{X}{n} \right\rfloor - 2 \sum_{n \le X/2} \Lambda(n) \left\lfloor \frac{X/2}{n} \right\rfloor$$

- Here we used the fact that there is no contribution to the second sum when X/2 < n ≤ X.
- Now we apply Theorem 3 and obtain for $x \ge 4$

$$X(\log X - 1) - 2\frac{X}{2}\left(\log \frac{X}{2} - 1\right) + O(\log X)$$

= $X \log 2 + O(\log X)$.

This establishes the first inequality of the theorem for all X > C for some positive constant C. Since ψ(X) ≥ log 2 for all X ≥ 2 the conclusion follows if C₁ is small enough.

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions

- Hardy and Ramanujan made the remarkable discovery that log log n is not just the average of ω(n), but is its normal order.
- Later Turán found a simple proof of this.

Theorem 10 (Hardy & Ramanujan)

Suppose that $X \ge 2$. Then

2

$$\sum_{n \le X} \left(\omega(n) - \sum_{p \le X} \frac{1}{p} \right)^2 \ll X \sum_{p \le X} \frac{1}{p},$$
$$\sum_{n \le X} (\omega(n) - \log \log X)^2 \ll X \log \log X$$

and

$$\sum_{\leq n \leq X} \left(\omega(n) - \log \log n \right)^2 \ll X \log \log X$$

> Robert C. Vaughan

Elementary Prime number theory

• Here is Turán's proof. It is easily seen that

r

$$\sum_{n \le X} \left(\sum_{p \le X} \frac{1}{p} - \log \log X \right) \right)^2 \ll X$$

0

3

Sac

and (generally if $Y \ge 1$ we have log $Y \le 2Y^{1/2}$)

$$\sum_{2 \le n \le X} (\log \log X - \log \log n)^2 = \sum_{2 \le n \le X} \left(\log \frac{\log X}{\log n} \right)^2$$
$$\ll \sum_{n \le X} \frac{\log X}{\log n}$$
$$= \sum_{n \le X} \int_n^X \frac{dt}{t}$$
$$= \int_1^X \frac{\lfloor t \rfloor}{t} dt$$
$$\le X.$$

- **Proof.** Suppose that $r \in \mathbb{N}$, r > 1 and p is a prime with $p \nmid k$ and $p | \Phi_k(r)$.
- Then $p|r^k 1$ and $p \nmid r$.
- Thus $e = \operatorname{ord}_p r | k$, and if m | k and $p | r^m 1$, then e | m.
- Write r^e = 1 + up^v for some positive integers u and v with p ∤ u.
- Then $r^{e\ell} 1 = (1 + up^{v})^{\ell} 1 \equiv \ell up^{v} \pmod{p^{2v}}$.
- Thus if ℓ|k, so that p ∤ I, then p^v is the exact power of p dividing r^{eℓ} 1.
- Thus the exact power of p dividing $\Phi_k(r)$ is

$$\prod_{\substack{m|k \\ e|m}} (p^{v})^{\mu(m)} = p^{v \sum_{l|(k/e)} \mu((k/e)/l)}.$$

> Robert C. Vaughan

Elementary Prime number theory

Primes in Arithmetic Progressions • Thus the exact power of p dividing $\Phi_k(r)$ is

$$\prod_{\substack{m \mid k \\ e \mid m}} (p^{v})^{\mu(m)} = p^{v \sum_{l \mid (k/e)} \mu((k/e)/l)}$$
